

# J-Term: Intensive Courses

January 10 – January 21, 2022

ENROLLMENT DEADLINES	GSAS ACADEMIC CALENDAR
<p>J-Term Enroll Open-Close Nov. 2 – Dec. 6</p> <p>J-Term Semester: Jan. 10 – Jan. 21</p> <p>Spring Semester Begins: Jan. 24</p>	<p><a href="https://registrar.fas.harvard.edu/gsas-academic-calendar">https://registrar.fas.harvard.edu/gsas-academic-calendar</a></p>
REMINDERS	
<p>* J-Term courses are considered Spring term courses. Credits will be counted towards your Spring term credits.</p> <p>* Register by going to <a href="https://my.harvard.edu/">https://my.harvard.edu/</a></p> <p>* For questions, contact: <a href="mailto:dms_courses@hms.harvard.edu">dms_courses@hms.harvard.edu</a></p>	

**BCMP 301QC Translational Pharmacology: The Science of Therapeutic Discovery and Development**

David E. Golan, Catherine I. Dubreuil, Mark N. Namchuk  
Jan 3 - Jan 21

**DRB 330QC Experimental Approaches to Stem Cell, Developmental & Regenerative Biology**

Trista North, Ya-Chieh Hsu, Olivier Pourquie, Eric Greer, Jeffrey Macklis, Wolfram Goessling, April Craft, Jenna Galloway, Davie Van Vactor, Xi He  
Jan 10 – Jan 21

**HBTM 301QC Case Studies in Human Biology & Translational Medicine**

Thomas Michel, Marc Bonaca  
Jan 10 – Jan 21

**MICROBI 302QC Introduction to Infectious Disease Research: Infectious Diseases Consortium Boot Camp**

Dyann Wirth, Deepali Ravel  
Jan 18 – Jan 21

**NEUROBIO 323QC Quantitative Methods for Biologists (Python)**

Eleanor Batty, Rick Born  
Jan 10 – Jan 20

**SHBT 203 Anatomy of Speech & Hearing**

Barbara Fullerton, James Heaton  
Jan 4 – Jan 28

**VIROLOGY 301QC Advanced Topics in Virology: Viral Oncology**

James DeCaprio  
Jan 4 – Jan 20

## Biological Chemistry & Molecular Pharmacology

### **BCMP 301QC Translational Pharmacology: The Science of Therapeutic Discovery and Development**

David E. Golan, Catherine I. Dubreuil, Mark N. Namchuk

2 units. Enrollment limited to 56. Instructor consent required.

**Meeting Dates:** Jan 3 – Jan 21

Mon - Fri, 10:00am – 12:00pm, live in person content with some synchronous zoom sessions

**Course Note:** Schedule runs outside the J-Term semester dates. Class sessions will begin on **January 3** and will run through **January 21**.

**Location:** This course will be held in-person. Reach out to Catherine Dubreuil, [catherine\\_dubreuil@hms.harvard.edu](mailto:catherine_dubreuil@hms.harvard.edu), for location specifics

This intensive course, held during three weeks in January (14 class days), covers principles of pharmacology and their translation into new drug discovery and development. Students participate in project groups, composed primarily of graduate students, to propose a drug development strategy from target choice through clinical trials. Most sessions include lectures, panel discussions, and/or case studies presented by Harvard faculty and faculty experts from the pharmaceutical and biotechnology industries; most afternoons are either unscheduled or provide scheduled time to work on the group project. Evaluation is based on written and oral presentations of the group project and on class participation. Enrollment may be limited.

**Course Co-Directors:** David E. Golan, [david\\_golan@hms.harvard.edu](mailto:david_golan@hms.harvard.edu), Catherine I. Dubreuil, [catherine\\_dubreuil@hms.harvard.edu](mailto:catherine_dubreuil@hms.harvard.edu), and Mark Namchuk, [Mark\\_Namchuk@hms.harvard.edu](mailto:Mark_Namchuk@hms.harvard.edu)

## Developmental & Regenerative Biology

### **DRB 330QC Experimental Approaches to Stem Cell, Developmental & Regenerative Biology**

Trista North, Ya-Chieh Hsu, Olivier Pourquie, Eric Greer, Jeffrey Macklis, Wolfram Goessling, April Craft, Jenna Galloway, Davie Van Vactor, Xi He

2 units. Limited enrollment to 15. Consent of instructor required for undergraduates.

**Meeting Dates:** Jan 10 – Jan 21

Mon - Fri, 10:00am-4:00pm. Please reach out to [mara\\_laslo@hms.harvard.edu](mailto:mara_laslo@hms.harvard.edu) with any questions.

**Location:** Various; see syllabus for details

This laboratory and lecture-based course is designed to provide a survey of model systems and technical approaches utilized in developmental, stem cell, and regenerative biology. Students will complete a series of mini-rotations with laboratories of DRB faculty across the Harvard campuses and affiliated hospitals. Students engage with faculty and trainees to gain experience with a variety of models, experimental techniques, and research areas. Each day of the course will consist of an overview lecture followed by hands-on laboratory activities and interactive discussions, designed to facilitate student, lab member, and PI interactions. The course will culminate in a social event with the larger DRB community and short, informal student-led (five minutes, five slides) brainstorming sessions inspired by a lab session of their choosing.

**Course Note:** Open to first-year and second-year BBS students (HDRB undergraduates with approval of the course director). Not repeatable for credit.

**Class Notes:** Course meeting only on Jan 10; presentations only on Jan 21; optional DRB welcome party on Jan 20.

**Course Director:** Trista North, [trista.north@childrens.harvard.edu](mailto:trista.north@childrens.harvard.edu)

**Curriculum Fellow:** Mara Laslo, [mara\\_laslo@hms.harvard.edu](mailto:mara_laslo@hms.harvard.edu)

**Other Instructors:** Ya-Chieh Hsu, Olivier Pourquie, Eric Greer, Jeffrey Macklis, Wolfram Goessling, April Craft, Jenna Galloway, Davie Van Vactor, Xi He

## Human Biology & Translational Medicine

### **HBTM 301QC Case Studies in Human Biology & Translational Medicine**

Thomas Michel, Marc Bonaca

2 units. Restricted to Leder students only. Enrollment limited to 20. Instructor consent required.

**Meeting Dates:** Jan 10 – Jan 21

Mon - Fri, 9:00am-10:30am

**Location:** This course will be remote. The instructor will reach out with the zoom link and any additional information.

Two-week course that is required of and restricted to first-year LHB students. This course will review models of therapeutic development from epidemiologic observations through clinical development with a focus on lipid lowering therapies and diabetes. Students will be engaged in interactive workshops and will attend lectures led by leading clinical researchers.

**Class Notes:** This is an intensive January term course. Restricted to Leder students only.

**Course Instructor:** Thomas Michel

**Other Instructors:** Marc Bonaca, mbonaca@partners.org

## Microbiology & Immunobiology

### **MICROBI 302QC Introduction to Infectious Disease Research: Infectious Diseases Consortium Boot Camp**

Dyann Wirth, Deepali Ravel

2 units. Enrollment limited to 20. Instructor consent required.

**Meeting Dates:** Jan 18 – Jan 21

Tues – Fri, 9:00am – 5:00pm

**Location:** Some sessions of this course will be held in-person, and other sessions will be held online. The instructor will reach out with specific classroom information.

This January boot camp course provides a fun, informative introduction to the breadth of infectious disease research carried out at Harvard and beyond. Our goals are to introduce life science graduate students to potential thesis research areas while also giving you exposure to other topics and tools you'll encounter in the broader infectious disease research community. Students will also have the chance to meet faculty, students, and fellows in infectious disease roles across the university. The course will focus on several aspects of infectious diseases:

1. Underlying biology of infectious diseases and the diverse pathogens that cause them
2. Modern approaches to studying infectious diseases, including experimental biology, epidemiology, outbreak investigation, bioinformatics, and clinical microbiology
3. Modern approaches to developing new interventions, including drugs, vaccines, diagnostics, and public health measures
4. Societal impacts of infectious disease and historical perspectives on infectious disease research and injustice in infectious disease research

**Course Notes:** This course is designed for life sciences graduate students but is open for cross-registration from other students. The Winter 2022 version of this course will be taught primarily through synchronous in-person lectures, discussions, and workshops. Interested students with questions about accessibility or prerequisites should contact the course directors as soon as possible.

**Course Instructors:** Deepali Ravel, deepali\_ravel@hms.harvard.edu (primary course contact), Dyann Wirth

## NEUROBIOLOGY

### **NEUROBIO 323QC Quantitative Methods for Biologists (Python)**

Eleanor Batty, Rick Born

2 units. Enrollment limited to 35. Instructor consent required.

**Meeting Dates:** Jan 10 – Jan 20

Mon – Fri, 9:00am – 4:30pm (with one hour lunch break)

**Location:** This course will be held in-person. The instructor will reach out with specific classroom information.

**Course Note:** Bootcamp will occur on M 1/10, W 1/12, F 1/14, T 1/18, and Th 1/20. Office hours and homework help on alternate days.

The goal of this bootcamp is to introduce you to programming in Python and to show you the power this provides for analyzing data and for gaining intuition about the behavior of complex systems through the use of numerical simulations. Some of you, upon encountering in the previous sentence words like "programming" and "numerical simulations," will feel the cold hand of fear grip your stomach, because you have never done any programming and, in fact, have tried to avoid math as much as possible. If so, YOU ARE PRECISELY THE PERSON WE HAD IN MIND as we were planning the course. We are aiming to help you break through this barrier of darkness and fear into the radiant sunshine of quantitative enlightenment. The true beauty of Python, as we will personally demonstrate, is that it allows people who are not mathematically adept (e.g. some of the instructors of this course) to use powerful numerical methods and visualization tools to gain an understanding of concepts that are very difficult to grasp analytically.

**Course Instructor:** Eleanor Batty, [Eleanor\\_Batty@hms.harvard.edu](mailto:Eleanor_Batty@hms.harvard.edu)

**Course Co-Instructor:** Rick Born, [richard\\_born@hms.harvard.edu](mailto:richard_born@hms.harvard.edu)

## Speech & Hearing Bioscience & Technology

### **SHBT 203 Anatomy of Speech & Hearing**

Barbara Fullerton, James Heaton

4 units. Enrollment limited to 14. Instructor consent required.

**Meeting Dates:** Jan 4 – Jan 28

Mon-Fri, 9:00am – 1:00pm (class will start on a Tuesday, 1/4)

**Breakdown:** Lecture: 9:00am-10:15am, Anatomy Lab: 10:15am-1:00pm

**Please Note:** Schedule runs outside the J-Term semester dates. Class sessions will begin on **January 4** and will run until **January 28**.

**Location:** This course will be held in-person, in the TMEC 209, TMEC 250 and at Mass Eye and Ear. The instructor will reach out with specific classroom information.

This course covers anatomy of the head and neck with videos of some of the detailed anatomy. We will stress structures important in speech and hearing. Lecture topics include basic neuroanatomy, imaging, surgery and cancer of the head and neck.

**Course Note:** This is an intensive January course, offered jointly with MIT as HST 718. Students should be comfortable with basic biology. Students not enrolled in the SHBT program must get permission from the course director to register for the course.

**Course Instructors:** Barbara Fullerton, [bfullerton@mgh.harvard.edu](mailto:bfullerton@mgh.harvard.edu), James Heaton, [james.heaton@mgh.harvard.edu](mailto:james.heaton@mgh.harvard.edu)

## Virology

### **VIROLOGY 301QC Advanced Topics in Virology: Viral Oncology**

James DeCaprio

2 units. Enrollment limited to 10. Instructor consent required.

**Meeting Dates:** Jan 4 – Jan 20

Tue/Thurs, 4:30pm - 6:00pm

**Please Note:** Schedule runs outside the J-Term semester dates. Classes will be held on: **1/4, 1/6, 1/11, 1/13, 1/18, 1/20**

**Location:** To be provided on course page

Introduction to viral oncology and critical evaluation of key papers in viral oncology. Requirements include presentations, written critiques, and class participation.

**Course Notes:** This is an intensive January course, limited to Virology students only

**Course Instructor:** James DeCaprio, [james\\_decaprio@dfci.harvard.edu](mailto:james_decaprio@dfci.harvard.edu)
